Ancile Aeris v2.0 Four-Minute Video Script

LRBAAsubmission Counter-UAS / Anti-Terror Defensive System Property of Fratres X AI GitHub:
<https://github.com/FratresMedAI/Ancile-Aeris> **Target Runtime:** 4:00 **Tone:** professional, confident, defense-tech, submission-ready

Narration + Visual Script

Time	Narration	On-Screen Visual	
0:00-0:15	"Ancile Aeris v2.0 is a working ROS 2 counter-UAS and anti-terror defensive platform for mass-gathering security, critical infrastructure protection, and auditable human-governed response."	Title slate: "Ancile Aeris v2.0 - Layered Non-Kinetic C-UAS Defense" with Fratres X AI branding.	
0:15-0:30	"The system is live on GitHub and demonstrates the full defensive pipeline: sensing, fusion, DARKSPACE audit, safety gates, mesh scout ISR, cognitive EW, and layered non-kinetic effectors."	Repo page or package tree; highlight <code>ancile_aeris_effectors</code> , <code>ancile_aeris_bringup</code> , <code>scout_mothership</code> , and <code>ancile_aeris_darkspace_integration</code> .	
0:30-0:50	"We begin with a clean ROS 2 launch of the LRBAAsubmission demo stack."	Terminal: <code>ros2 launch ancile_aeris_bringup ancile_aeris_basic_demo.launch.py</code> .	
0:50-1:10	"The platform fuses simulated visual, thermal, acoustic, RF, lidar, and SIGINT-style evidence into machine-readable tracks on <code>/fused_tracks</code> ."	Echo <code>/fused_tracks</code> ; overlay: "Multi-modal evidence -> fused C-UAS track."	
1:10-1:30	"A <code>PID >= 0.999</code> safety context constrains downstream recommendations. High-consequence actions remain monitor-only unless authorization is satisfied."	Echo <code>/safety_gate_status</code> ; overlay: " <code>PID >= 0.999</code> "	Human authority preserved."
1:30-1:55	"The scout mothership layer provides mesh ISR, coordinated coverage, and Lattice-style situational awareness analogs."	Echo <code>/mesh/mothership_swarm_status</code> and <code>/scout_eyes</code> ; show simple mesh map graphic.	
1:55-2:20	"DARKSPACE audit is clean. The verified status is <code>integrity_ok: true, chain_gap_count: 0</code> , with zero hash-chain mismatch warnings."	Echo <code>/darkspace/status</code> ; overlay: "DARKSPACE Clean."	
2:20-2:55	"The core v2.0 innovation is the layered non-kinetic defeat stack: HPM-class denial, cognitive jamming, GNSS/link spoofing, control-link takeover, multi-sensor deception, and monitor mode."	Echo <code>/effector/status</code> ; animated effector catalog.	
2:55-3:20	"The platform selects an effector plan for the current track and publishes decision logic, authorization state, monitor-only status, and XAI rationale on <code>/effector/selected_plan</code> ."	Echo <code>/effector/selected_plan</code> ; zoom on <code>selected.mode</code> , <code>xai.rationale</code> , <code>monitor_only</code> , <code>authorized</code> .	

Time	Narration	On-Screen Visual	
3:20-3:40	"The cognitive EW chain converts the plan into a human-vetted recommendation on /cognitive_ew_commands, preserving explainability and operator control."	Echo /cognitive_ew_commands; highlight selected_effector_mode, effector_family, xai_rationale.	
3:40-3:52	"Ancile Aeris v2.0 aligns with DHS PEO UAS/C-UAS priorities and integration pathways associated with Anduril Lattice, JIATF-401 Marketplace, Fortem DroneHunter F700-class systems, Epirus Leonidas-style non-kinetic concepts, and Replicator 2 rapid fielding."	Logo-neutral alignment slate.	
3:52-4:00	"Ancile Aeris v2.0 is submission-ready: layered, auditable, non-kinetic, and human-governed."	Closing slate: "Ancile Aeris v2.0 - Property of Fratres X AI - GitHub: FratresMedAI/Ancile-Aeris."	

Required Live Commands

```
cd /opt/ancile_aeris_ws
source /opt/ros/kilted/setup.bash
source install/setup.bash
ros2 launch ancile_aeris_bringup ancile_aeris_basic_demo.launch.py
```

In a second terminal:

```
ros2 topic list | grep -E 'effector|cognitive_ew|darkspace|audit|mesh|fused_tracks'
ros2 topic echo --once /darkspace/status
ros2 topic echo --once /effector/status
ros2 topic echo --once /effector/selected_plan
ros2 topic echo --once /cognitive_ew_commands
ros2 topic echo --once /mesh/mothership_swarm_status
```

On-Screen Text

- ? "Full layered non-kinetic defeat stack"
- ? "HPM-class denial | cognitive jamming | GNSS/link spoofing | control-link takeover | multi-sensor deception"
- ? "Cognitive selection with XAI rationale"
- ? "DARKSPACE clean: integrity_ok=true, chain_gap_count=0"
- ? "Human-on-the-loop: no autonomous weapon release"
- ? "DHS PEO UAS/C-UAS | JIATF-401 Marketplace | Replicator 2"
- ? "Property of Fratres X AI"

Standard Disclaimer

Simulation-only C-UAS defensive demonstration. No autonomous weapon release. Government and industry references are alignment examples only and do not imply endorsement.

Production Notes

- ? Record in 1080p or higher with a large terminal font and dark theme.

- ? Keep two terminal panes: launch on the left, topic proof on the right.
- ? Use restrained motion graphics for the pipeline, effector catalog, DARKSPACE status, and mesh ISR.
- ? Music should be modern, confident, and controlled; avoid aggressive combat cues.
- ? Narration should be calm, senior, technical, and evidence-driven.

Ancile Aeris v2.0 - Property of Fratres X AI
